Challenges to Scale

CDR developers today spend enormous amounts of time and capital producing due diligence materials, while buyers and service providers struggle to compare projects consistently across methodologies and technologies. The result is friction, duplication, and slower deployment of climate solutions.

From Raw Data to Scalable Impact

The vision of the TrueScale Climate Initiative is to create a free-access, centralized database for standardized carbon project data.

With support from the CDR Booster, we developed **DiligenceDone** – a due diligence platform that automates project reporting and makes high-quality project data accessible to buyers, service providers, researchers, and the public.

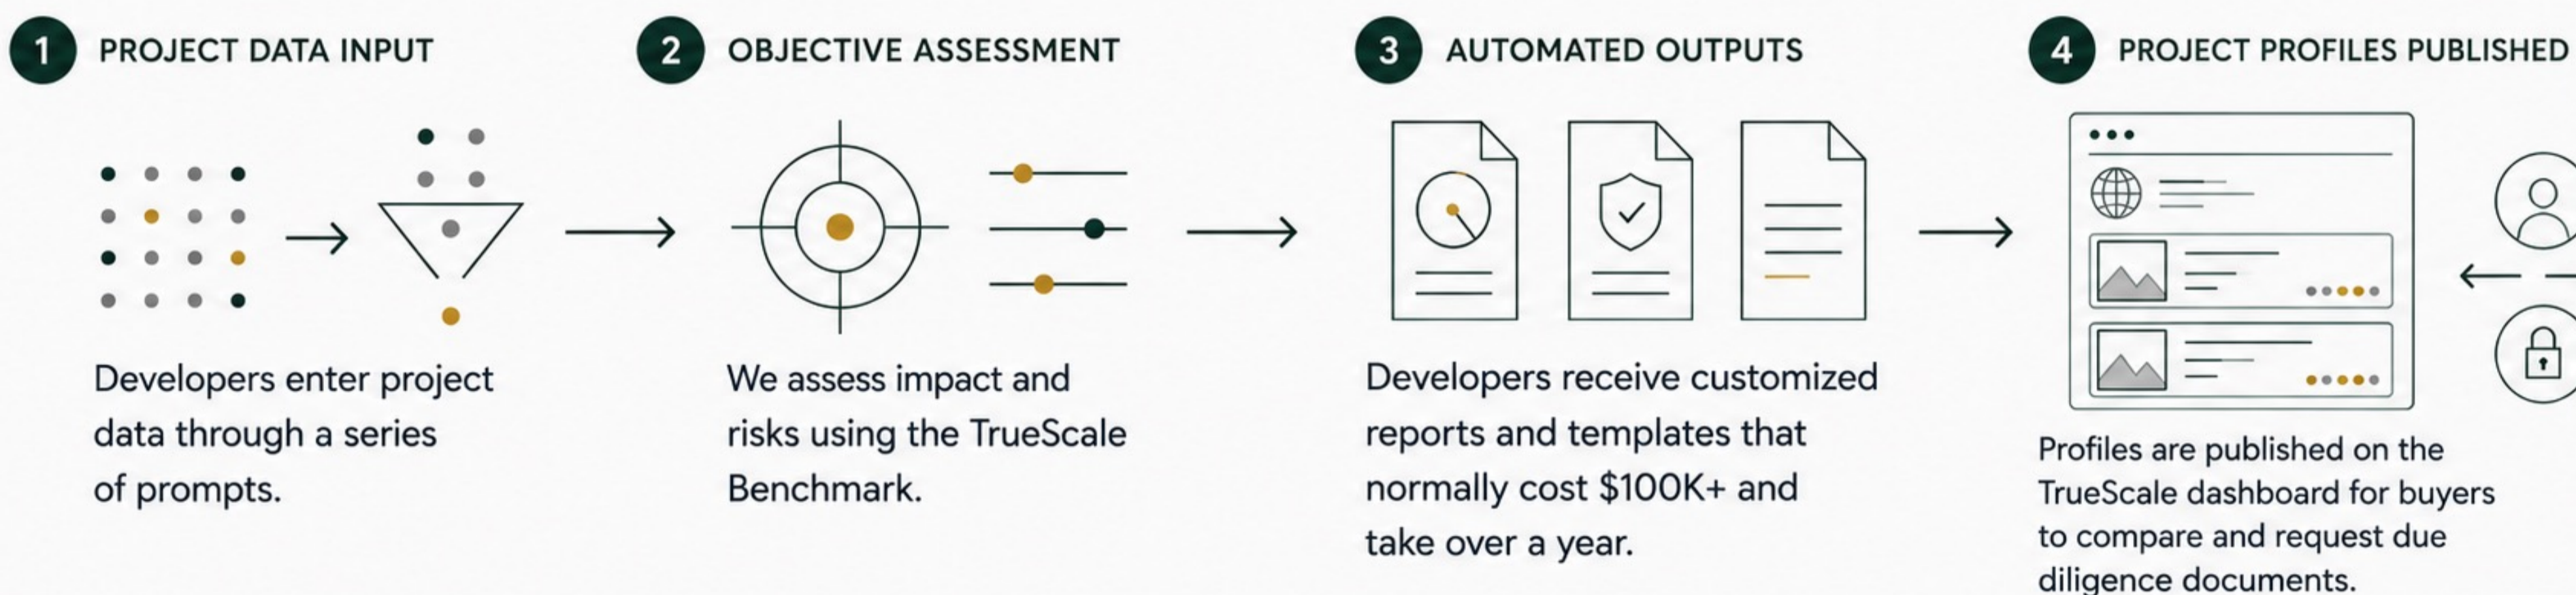

Using guided workflows and the TrueScale Benchmark, developers can generate:

- Due diligence reports
 - Risk & readiness assessments
 - Standardized project profiles
 - Project design documentation
- processes that traditionally cost over \$100K and take months to complete.

Project profiles are published to the TrueScale dashboard, where buyers can compare projects apples-to-apples and request additional due diligence materials.

All project data is securely stored in a centralized database accessible through APIs, helping create the scalable infrastructure needed for transparent and efficient carbon markets.

From Raw Data to Scalable Impact

CENTRALIZED & SECURE DATABASE
Standardized project data is stored securely in a centralized database.

API

API ACCESS FOR ECOSYSTEM
Permitted researchers and service providers access quality data through APIs to better scale their services.

Milestones

- 1 Research Data Needs
- 2 Program Automated Due Diligence Process
- 3 Test, Improve, Iterate
- 4 Pilot DiligenceDone and Receive industry feedback

Next Steps

- 1 Continue Piloting DiligenceDone with Project Partners
- 2 Launch DiligenceDone Publicly
- 3 Launch project comparison dashboard
- 4 Build API's between TSCi database and service providers

We are looking for Partners...

- **Funding Partners** who believe central access to comprehensive carbon market data is the key to scaling impact
- **Pilot Project Partners:** Project Developers, Buyers, Service Providers looking for access to better data
- **Research & Industry Partners** to collaborate on the TSCI benchmark assessment and data scope –what data would help improve your research or services?
